

# Create IBM Cloud Account

## Step 1:

Go to ICT Academy by just clicking the below provided link,

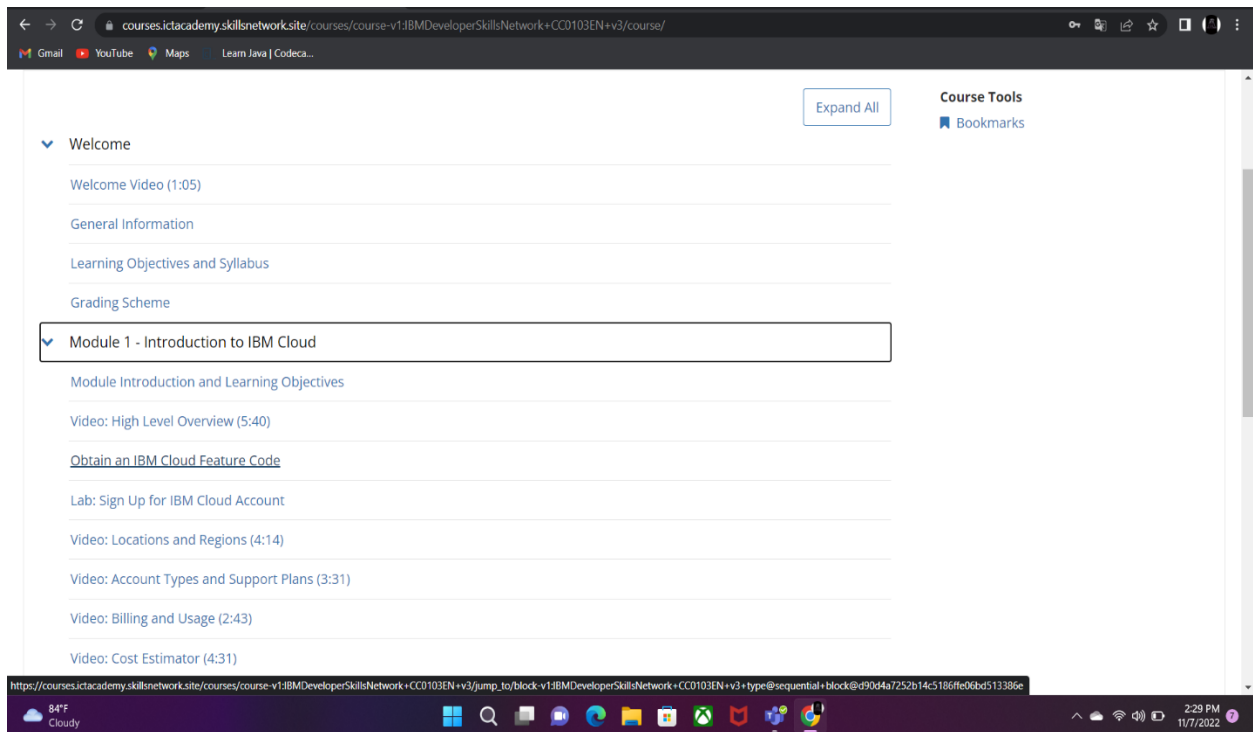

<https://courses.ictacademy.skillsnetwork.site/courses/course-v1:IBMDDeveloperSkillsNetwork+CC0103EN+v3/course/>

## Step 2:

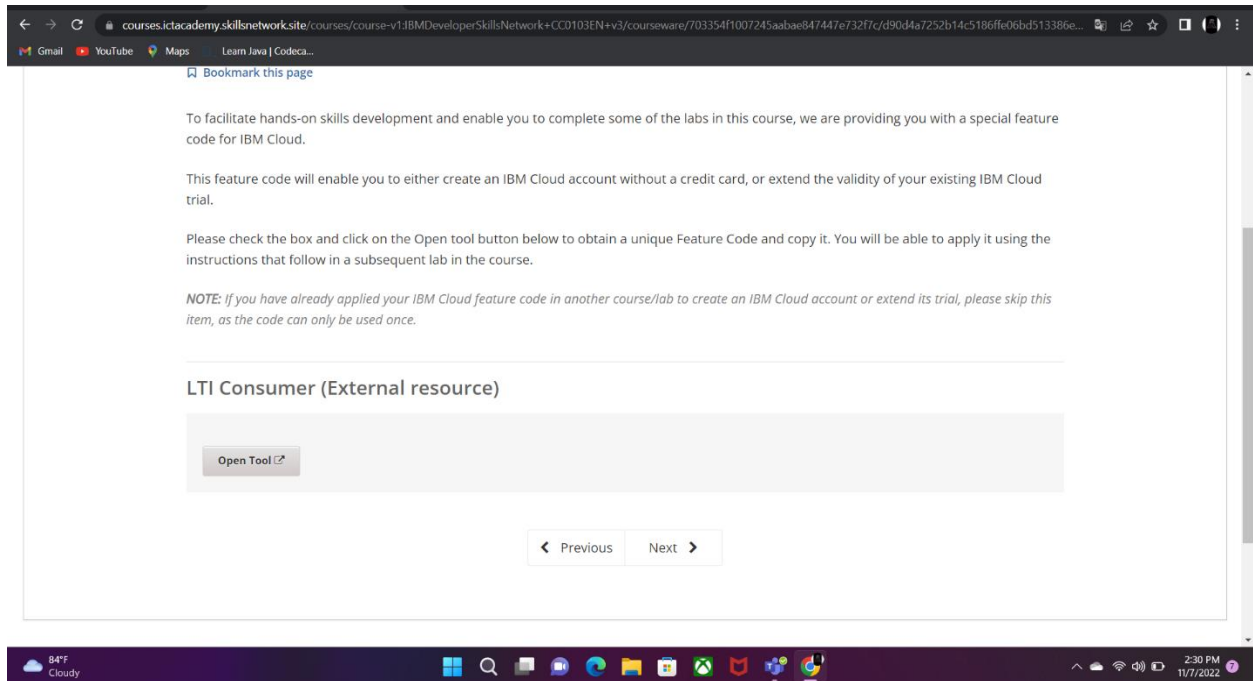

Register if you don't have ICT account If you have Account in ICT then just login in that link.

## Step 3:

Go to Module 1 and click obtain a feature code just shown in the below image.

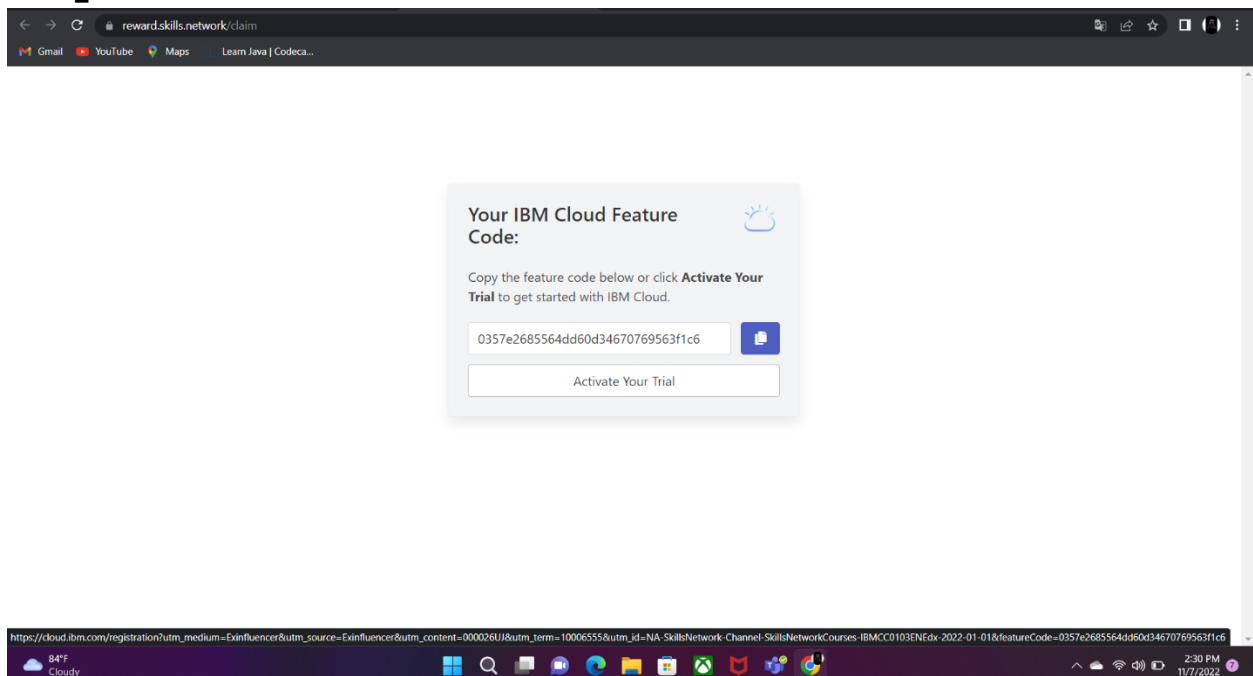

## Step 4:

Click on open tool button. There you will be getting feature code which is very much important for creating IBM cloud Account. When you clicks on open tool you will be asked for the Alert notification where you should give OK in that.

## Step 5:

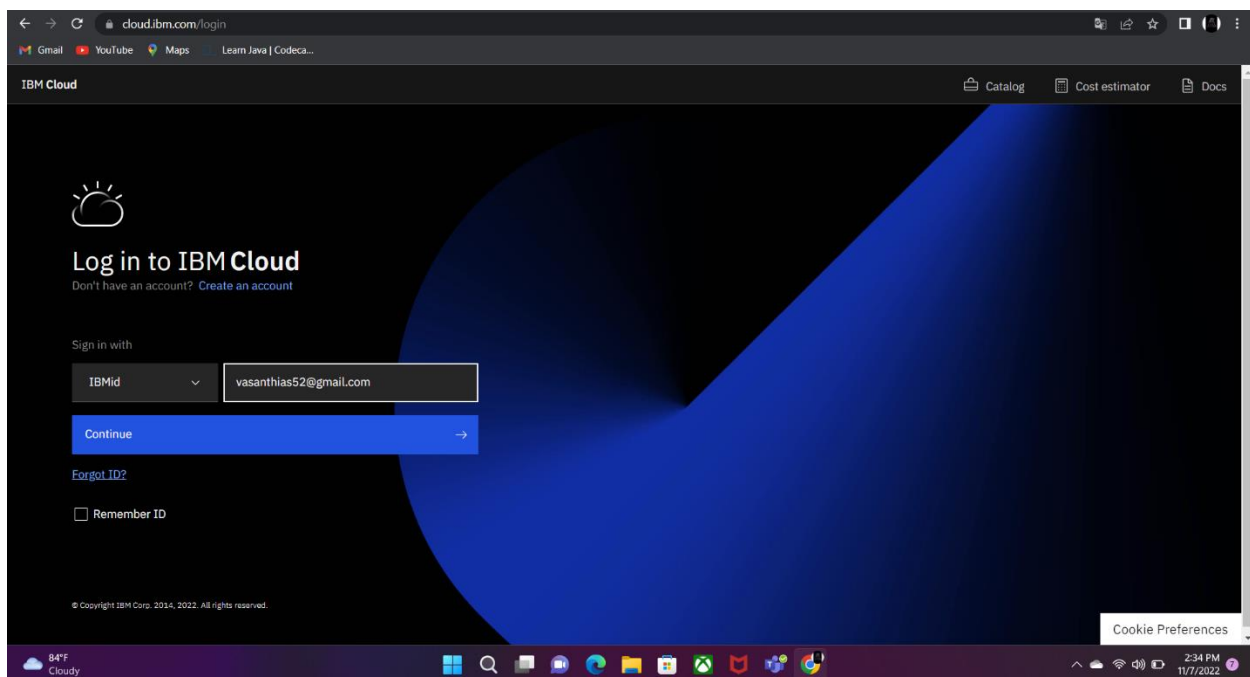

Click on Activate your Trial. Then you will be redirected to the cloud account creation page.

### Step 6:

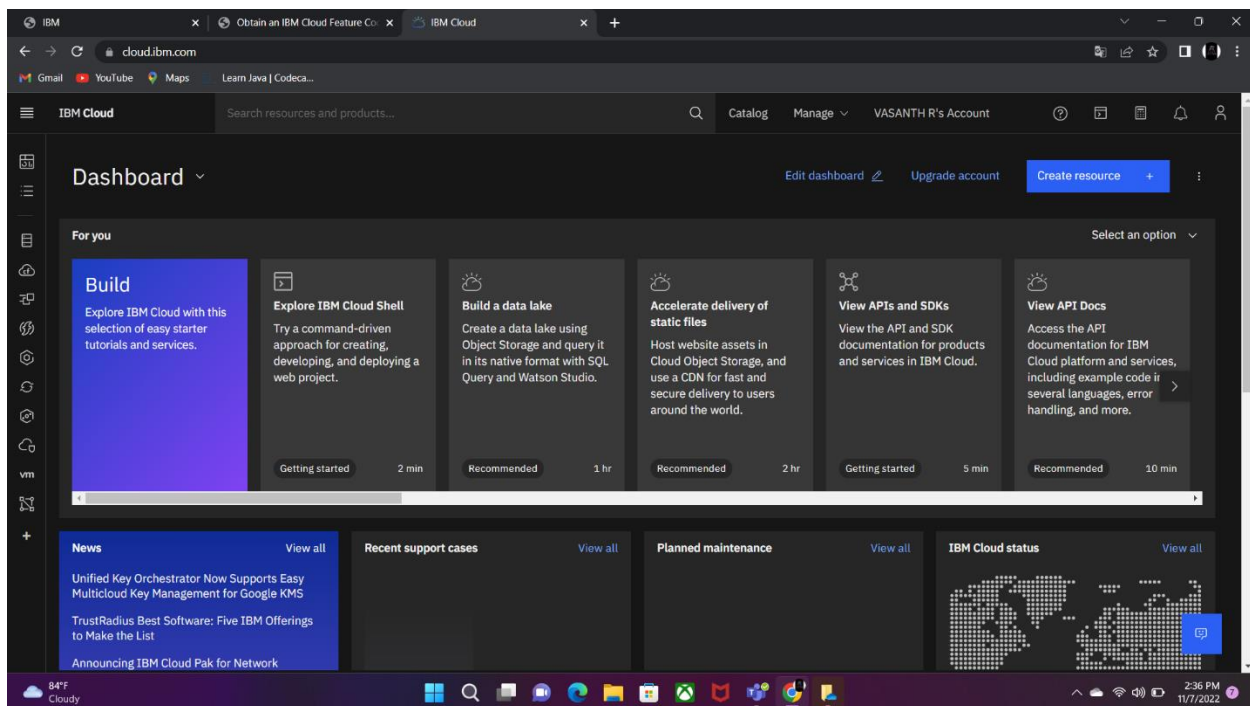

- You are asked for email address you should provide Password for your IBM Account
- Then you must verify your email address just by entering the verification which has been sent by an IBM.
- You are asked for your name and country when you provided those two, you must accept the terms and conditions.
- Then there you can see your feature code over there and proceed the things go further.
- By completing all the procedure, the IBM account is created.

Since am already having my IBM account let me sign-in to the Account.

After entering the mail address, I am asked for the password to enter.

After giving my login credentials my IBM Cloud Account dashboard will get open.

That's it I created the Cloud Account where I can access tools for my project and deploy my project in cloud.
